#### PuMA measure

### F25 N47T Pumping/hissing noise when boost pressure is reduced

V1-R2-SK 51029118-01 - 30/05/12

#### Complaint:

Pumping/hissing noise when boost pressure is reduced

---

#### Cause

---

Unfavourable DDE (Digital Diesel Electronics) application:  
An airflow, which is undesirable and can consequently also be heard, is created in the area around the turbocharger intake.

---

#### Measure

---

In the event of a customer complaint, program the vehicle with ISTA/P P2.47.0 (expected to be available from July 2012) to integration level F025-12-07-502 or a more recent version.

N.B.: Until this integration level becomes available, no repair or parts replacement is permitted.

---

#### Validity information

---

Model series:	[F25]
Engine range:	[N47T]
Body style:	[ALL]
Fault codes:	[]
Production period:	Up to 01/08/12
